**D. Reading:**

**Read the passage and answer the questions. (4 point)**

Microbes are really wonderful. They are everywhere! They live all around you, on you and inside you! Microbes are very small, so you can't see them. But don't worry. Some microbes make you sick but most others keep you healthy and even help you to fight disease. There are so many different types of microbes. We still don't really know how many there are, but we know that microbes do lots of different things. Bacteria and viruses are two important types of microbes. Bacteria are really important microbes. They are very small. They have only one cell. Bacteria can live in any area of the earth. They aren't all bad; In fact, you couldn't live without some bacteria. Viruses are among the smallest microbes on the earth, even smaller than bacteria. They are different from bacteria because they can't live on their own. Viruses need to be inside a living cell to live and grow. There aren't many good things about Viruses- they usually attack your body and make you sick.

39. How many important types of microbes are there? Name them.

40. Which microbe can live only inside a living cell?

41. **Which one about bacteria is not correct?**

a) Some bacteria are useful.

b) Bacteria live outside and inside you.

c) All bacteria make you sick.

d) Bacteria are larger than viruses.

42. **Which one about viruses is correct?**

a) They can live alone.

b) They can grow outside a living cell.

c) They are the smallest microbes.

d) They can live in any area of the earth.

43. **You can't see microbes without microscopes.**

TRUE - FALSE

44. **We exactly know the number of microbes.**

TRUE - FALSE

**GOOD LUCK**
